

Innovative Strategies for the Road Ahead

## ARMoured VEHICLE AWARENESS TRAINING

## The world's first broad based awareness training specifically for fleet managers who oversee civilian armoured vehicles

**This specialisation provides fleet managers with a broad-based awareness and understanding of civilian armoured vehicles. It is comprised of 12 training modules.**

By enrolling in this specialisation, the participant has the advantage of completing all 12 modules with the bonus of cost savings than taking the individual modules.

### **Target audience**

This training is designed for fleet managers who have never managed an armoured vehicle, as well as those who have.

If you currently, or plan in the future, to have civilian armoured vehicles in your fleet, this will give you a broad-based awareness and understanding of the unique characteristics of an armoured vehicle and the key issues of how to operate the armoured vehicle in the safest and most efficient way.

For managers who already have armoured vehicles in their fleet, this training will be a good refresher of what you have might have already learned.

<b>When</b>	Self-paced Start immediately
<b>Format</b>	Online: (with a computer or smartphone)
<b>Duration</b>	12 hours
<b>Language</b>	English
<b>Vehicle Types</b>	Civilian Armoured Vehicle

**USD \$400**  
 Save 20% by buying the 12-in-1 training specialisation

**Learning objectives**

By the end of the specialisation, you will be able to:

- Understand the unique physical components of an armoured vehicle, how it is built and more importantly, how it is fundamentally different to a regular 'non-armoured' vehicle;
- Know the basics of the science behind ballistic and blast threats and therefore how the vehicle is designed and built to protect against these types of threats;
- Understand how the additional weight of an armoured vehicle dramatically changes the vehicle's mobility characteristics and dynamics;
- Conduct practical safety and maintenance inspections on your vehicles;
- Recognise the importance of scheduled maintenance and servicing of your armoured vehicle;
- Know the key aspects of a structured through life support system so as to improve fleet outcomes, reduce costs and delays and increase your fleet's operational availability;
- Recognise the components & systems utilised in a mature supply chain management process;
- Be aware of the principles of selection and authorisation of mechanical workshops that will maintain your armoured vehicle fleet;
- Know how to manage warranty claims for your civilian armoured vehicles;
- Understand the importance of reporting accidents within your organisation;
- Know how you can learn important safety lessons from any vehicle accident.

**ALSO AVAILABLE: 7-PART ARMoured VEHICLE  
AWARENESS TRAINING FOR DRIVERS**

1. Fundamentals of Civilian Armoured Vehicles
2. Introduction to Ballistics
3. Introduction to Blast Resistance
4. Vehicle Dynamics
5. Vehicle Maintenance
6. Safe Operational Use
7. Vehicle Accident Reporting

This training is available for USD \$280

You save 20% by buying the 7-in-1 training specialisation

## Receive your certificate

This is an awareness training course. You are required to:

- progress through all the lectures in order;
- view a minimum of 90% of the video content;
- complete all the questions in the graded assessment at the end of each lesson (where applicable).

Please note you are also required to obtain a minimum 60% pass rate to achieve the basic Knowledge Level 1.

When you have completed the assessment quizzes for this course, you will be awarded a certificate noting your level of awareness.

## About Armoured Consulting

Armoured Consulting was established to ensure that operators of armoured civilian vehicles could access independent, unbiased and highly skilled technical advice that would enhance the overall safety and efficient operation of their varied fleet of vehicles.

As independent experts and consultants, Armoured Consulting provides services to government agencies and diplomatic missions in the USA, UK, Europe, Middle East, South East Asia and Australia.

These services include armoured vehicle inspections and reporting, supervised repairs and maintenance, through life support, vehicle systems engineering design and capability reviews, procurement, training and disposal.
